

Skala 1:2

## Important information!

Imprint under the reflective surface does not affect the ability to reflect and the reflector is EU-compliant,

but the produced product differs in appearance from the proof.

The approved reflective material have some marks and lines which may be visible on the surface of the finished product.

This is unavoidable in the production of the reflective material.

To avoid any misunderstandings, please ask for samples from previous productions.

A CMYK color is only a reference color and may appear different depending on where it's shown. A printer or a computer screen may have different colors settings. Also observe that colors may appear different depending on the color, the surface and the material of the product. We can never guarantee exact CMYK colors.

This proof only illustrates the placement and proportions of the marking and should be considered as an indication of the final product. We take no responsibility for errors not corrected.
